

TECHNICAL CARD  
**BACTOSAFE H**

Bactosafe H is a concentrated bacterial complex specially selected to enhance water quality in hatcheries, improving the health of fish and shrimp.

The specific strains have been selected for their unique properties:

- Concentration CFU/gr: 2,0 x 10exp9.
- Regulation of the microbial ecosystem of culture water.
- Reduces dangerous levels of ammonia, nitrite and sulfide pollutants.
- Reduction in undesirable microorganisms.
- Robustness and stability during storage.
- Reduce needs for water exchanges.

**INGREDIENTS**

*Bacillus subtilis,*  
*Bacillus licheniformis,*  
*Bacillus coagulans,*  
*Lactobacillus acidophilus,*  
*Saccharomyces cerevisiae,*  
 Growth medium

**INSTRUCTION FOR USE**

**Hatchery & Nursery Application**

General Larval Culture, Maturation and spawning. Weigh 5 ppm (5 g/m<sup>3</sup>), mix with water and spread evenly over the tank. Start using before stocking larvae and apply daily, compensating the water exchanged. In case of high ammonia or delays in the stages, apply 10 ppm.

**Live Feed**

Algae, Rotifer culture, Artemia hatching. Weigh 10 ppm (10 g/m<sup>3</sup>), mix with water and spread evenly over the tank. Start using before stocking live feed.

**STORAGE CONDITIONS**

Store in a cold place  
 (best at 20°C, max. 35°C)  
**SHELF-LIFE**  
 2 years

**PRODUCT INFORMATION**

Bactosafe H is non-toxic and harmless to humans or animals. It leaves no residues and has no withdrawal time. It is a microbial water conditioner and should not be mixed with food.

**PACKAGING**

Pouches of 1.0 kg (6.0 kg carton)
