

Caviar is a truly unique product composed of agglomerated micro-capsules. Each capsule is filled with small peptides and low MW soluble proteins, nucleotides, EFA phospholipids and a balanced profile of chelated trace minerals. The key ingredient - frozen krill mince (*Euphausia superba*) - ensures a better palatability, increased performance and extremely low level of contaminants (metals or dioxins).

- Particle more stable in water with an easy digestion
- Ensuring healthy larvae development and higher survival rates
- Matching different stages of fish larvae
- Classified in different sizes
- High quality ingredients
- Microencapsulated diet
